

**FORESTSCAPING - SCOPE OF WORK, TERMS AND CONDITIONS**

**KEY DETAILS:**

- Total Area = \_\_\_\_\_ sq m.
- Minimum forest cover will be 90% of the total area.
- 10% (or as agreed) space allocated for walkway, maintenance path and sitting space.
- Plantation density = minimum 3 saplings per square meter.
- Minimum number of individual saplings to be planted = \_\_\_\_\_ (area X density).
- Maintenance will be the client's responsibility. Maintenance guidelines will be provided by Afforestt. If AMC is given to Afforestt, then maintenance will be Afforestt's responsibility.

**Forestsapling cost includes:**

- 1) Afforestt's technical expertise, skill, knowledge and experience in forest creation using Miyawaki method.
- 2) Soil assessment and study to determine most suitable soil nourishment techniques.
- 3) Creation of database of Potential Natural Vegetation (PNV) and quantification as per Miyawaki method of forest creation.
- 4) Restore soil health using organic materials that enhance its aeration, water retention, nutrients and food-web (microbiology).
- 5) Seedlings of native species. For any climate and soil, minimum density will be 3 saplings per square meter.
- 6) Most appropriate machinery for earth work i.e. soil preparation up to a minimum depth of 1 meter.
- 7) Manpower for all the forest creation related work with necessary tools and equipments.
- 8) Most appropriate soil mulching material. The entire forest floor will be covered with mulch during forest creation.
- 9) Sticks for saplings that need support.
- 10) Forest design, subject to client's approval. The design will be made in order to maximize forest accessibility and create an interesting personal experience. It will provide for walkway(s) and sitting space(s).
- 11) Creation of walkway and sitting space using simple organic and earthy materials only.
- 12) Assessing overall health and growth for a period of 1 year. In 1 year the forest will get established.

13) Afforestt will openly share the methodology of forest-creation and any person(s) nominated by the client will be trained to become forest-creators.

Client's responsibilities - Following Prerequisites to be met, before the project is commissioned:

- 1) Site readiness to be ensured (as per the annexure Site\_Readiness\_Checksheet.pdf).
- 2) If site does not consist of soil, then soil replacement is to be done.
- 3) A proper water supply connection to be provided.
- 4) Lights for the forest (if required).
- 5) Security staff and fencing.
- 6) The team on ground and the site itself should have all necessary legal approvals for forest creation.
- 7) Original drawing in AutoCad format to be provided.
- 8) Approval to implement the Miyawaki method in its purest form with no deviation or change to the standards being followed by Afforestt.
- 9) Forest will be maintained by as per the standard maintenance guidelines provided to the client by Afforestt.
